Variety

Forget-Me-Not*

Lavender***

Strawberry**

Dwarf Sunflower***

Marigold***

Pansy*

Love-in-the-Mist***

Primrose***

Passion Flower***

* requires partial shade, avoid direct sun

** germinates in 5-7 weeks, transplant when 5 leaf stage is reached

*** likes full sun, **approx. 4-6hrs.**, can tolerate dry, hot conditions

INSTRUCTIONS

Place peat pellet in a cup with water. When thoroughly moist and expanded, crumble growing medium into the terra cotta pot. Remove ½ tsp.

crumbled growing medium and set aside. Scatter several seeds evenly

onto the moist crumbled growing medium then lightly sprinkle grow mix that was set aside over the seeds. Cover pot with plastic wrap to simulate a green house effect. Place pot in a dish with 3/8" of water (10 mm). Add water regularly to maintain water level in dish at 3/8" (10mm). When seeds start to germinate, remove plastic wrap. When seedlings are about 2" (5 cm) tall, transplant them to a larger pot. Enjoy!
